

# Pipe and Drape Case Study

## BRIEF:

Pipe and drape is the best way to drape a venue where you can't drill fixings into the venue. It's easy to install, fast and cost effective.

## WHAT WE DID:

- We own a huge stock of draping including marquee drapes from our temporary structure branch of our business.
- Our pipe work comes in heights of 2m-3.6m however we can adapt to 6m in height if required.
- Our pipe widths range from 60cm to 3.6m making the system very versatile.
- We stock a range of black, white and ivory drapes as well as huge stock of coloured overlays.
- We can provide brand new fresh material for one off events. These are available in different types of material and thickness.
