

Dance Floor Lighting Case Study

BRIEF:

Whilst you may have atmospheric lighting in your venue and some stage lighting, you will need directional lighting on the dance floor to react with your guests and the music.

WHAT WE DID:

- We can supply and install temporary disco lighting systems for weddings, parties and events using our own intelligent lighting units.
- For a more impressive finish, we can install a complete nightclub lighting system above the dance floor.
- We can pre-programme and synchronise automated lighting sequences that will run at the touch of a button.
- Dance floor and disco lights can include colour-changing wash lights, moving heads, mirror balls, ultra violet and laser beams and patterns.
- We can also include smoke machines to highlight beams of light mid-air and aluminium support structures for hanging
